

CARING FOR THE FUTURE

With over 25 years continuous experience of the wireless industry, the founders of IRIS IoT Solutions bring a deep understanding of the technical and commercial challenges and opportunities that surround IoT, the new wireless landscape and the many industries and sectors that it connects.

By introducing the expertise of industry leading specialists in hardware, network and BI solutions, IRIS develops customer centric solutions that fit the requirements of a program, not simply fit the requirements of a program into a single source solution.

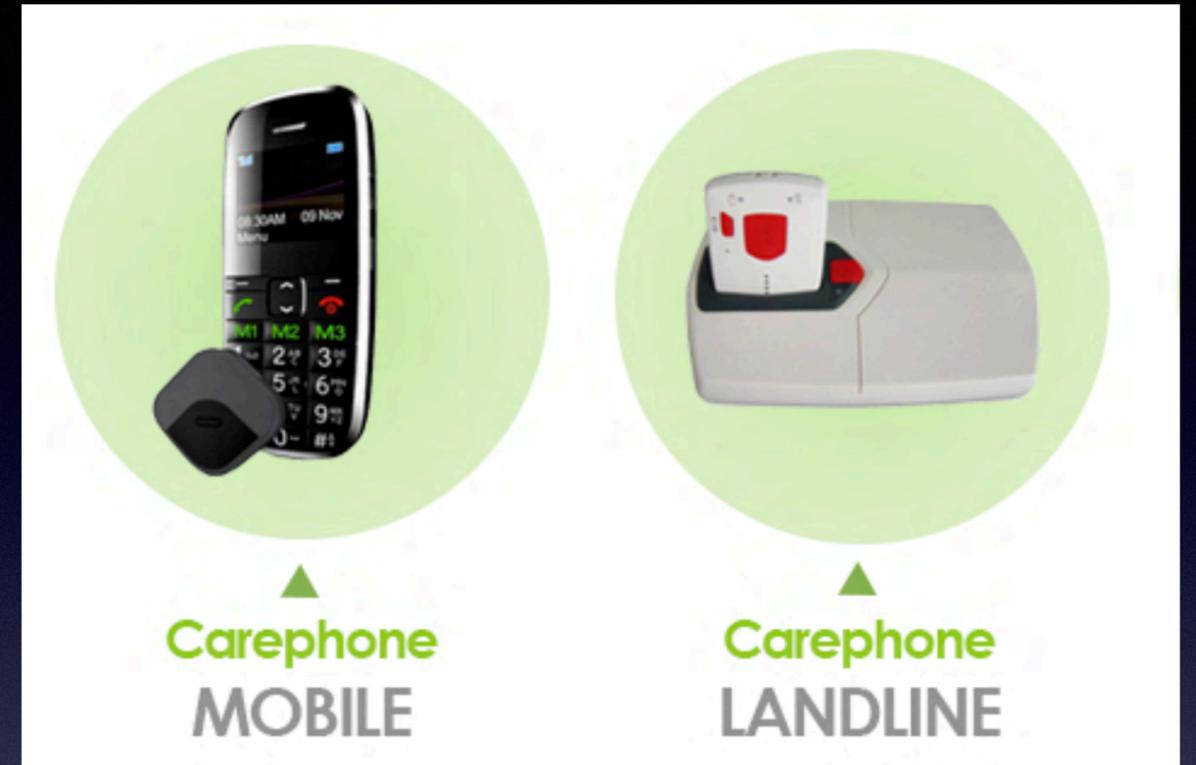

Whether the simple deployment of a monitoring sensor or implementation of a complete systems architecture, **IRIS IoT** delivers a solution that will improve performance and increase productivity.

Established for over 10 years. Carephone develop technology to support carers and enable the elderly and disabled. Our assisted living products help you to live more independently.

The ideas behind our innovative assisted living products are driven by the practical needs of alarm-service users. We're continually improving the way they work. And are developing new products and services in response to feedback from customers.

We were the first to develop a GPS Tracking phone with a fall sensor included. And the first waterproof SOS pendant with voice included (See image to the right)

We were one of the first UK companies
To be listed as a Vodafone IoT Partner

vodafone

EXPERIENCE

We have been involved in many projects, from oil pipelines to the agricultural industry monitoring the health of cattle and chickens

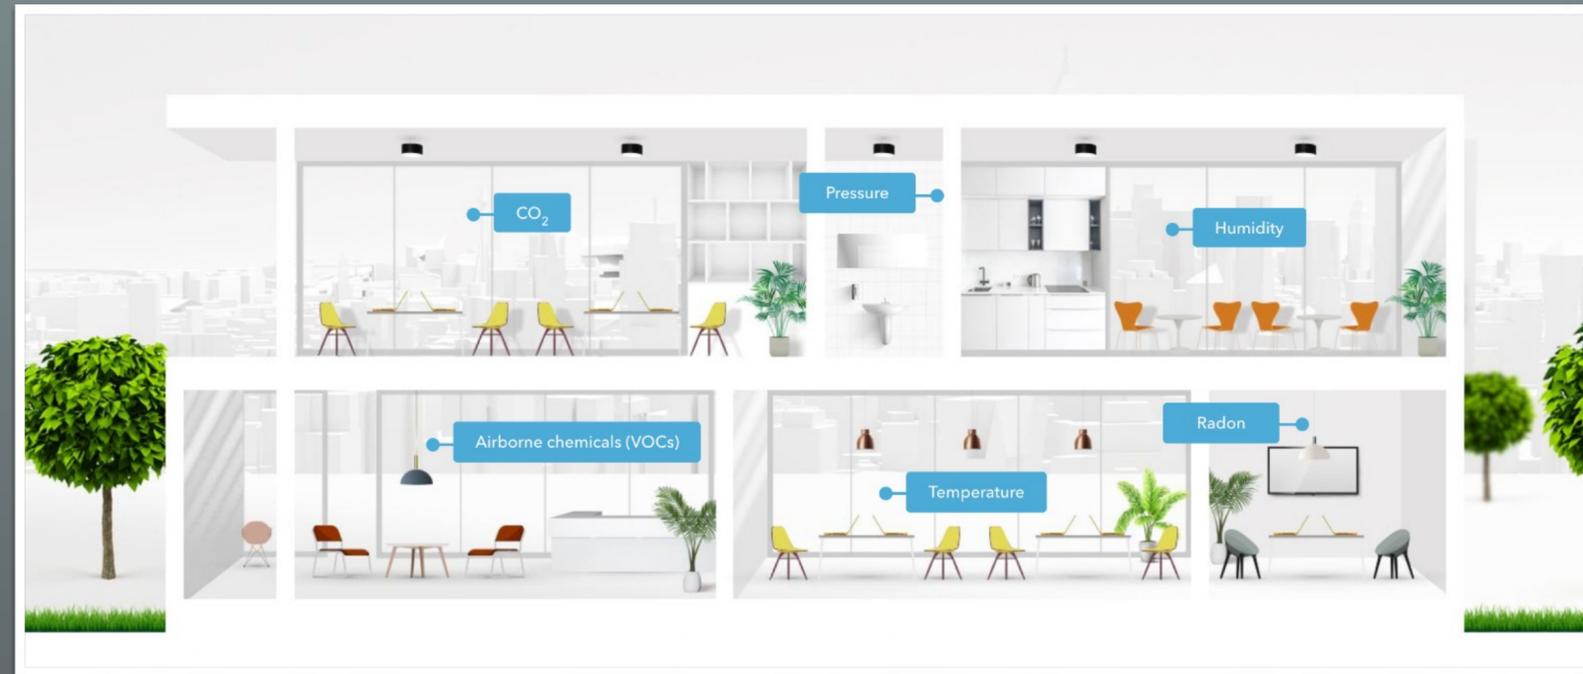

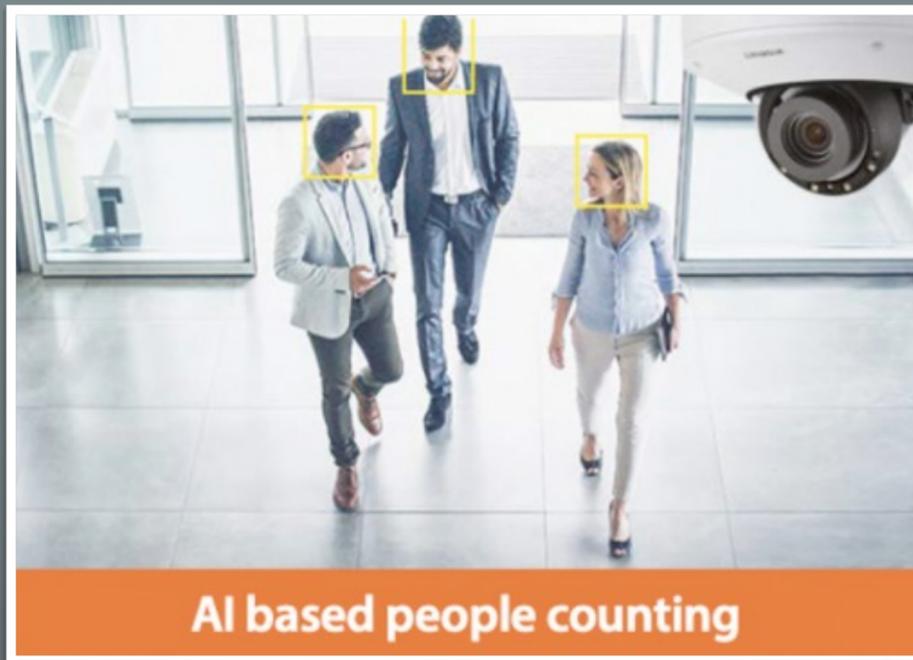

The workspace

Over the recent years we have been focusing on the work place, mainly looking at Air Quality and Occupancy.

It has been proven that air quality is a key factor in the wellbeing of workers and has a major influence on the output and mood of staff.

Also on the amount of days lost to sickness and stress.

2021

Assistive Living and Telecare

- With a few tweaks and changes we believe we can build the best solutions for this sector.
- We are coming to the market with a different attitude.
- We have learnt over the years of experience that there is not one solution to fit all needs.
- So we are entering the market again with open arms to build better solutions.

THE SYSTEMS

Our devices use the latest tech and the system has been designed to be bespoke to the end users needs.

THE FUTURE

The technology we have available now, not only in the hardware but in the software and platforms gives the carer so much more.

We are able to predict and prevent possible problems.

Carers will have more time to give one on one care.

People and environments will be protected.

We can give confidence to family members who can be reassured that their loved ones are being monitored and the right people will be alerted immediately a situation occurs.

There will be access to data both live and historic which will help in improving efficiencies and future care and help to budget for the months and years ahead.
